Standard-Resolution TOVS Observations
for the FIRE/SRB Wisconsin Experiment Region
from October 9 Through November 2, 1986

by

Charles H. Whitlock*, Stuart R. LeCroy**, and Wayne L. Darnell*

SUMMARY

Maps and concise tables are presented which show TOVS box centroid locations, box size, and vertical sounding products from the NOAA-6 and -9 satellites for the FIRE/SRB Wisconsin experiment region during October 9 through November 2, 1986. In addition to the operational standard products, relative reflectance is calculated and presented based on values from HIRS/2 Band 20 measurements.

INTRODUCTION

A field experiment was conducted in Wisconsin during October 1986 for purposes of both intensive cirrus-cloud measurements and Surface Radiation Budget (SRB) algorithm validation activities. The cirrus-cloud measurements were part of the First ISCCP (International Satellite Cloud Climatology Project) Regional Experiment (FIRE) as described by Starr¹. The algorithm validation activity was the first experiment of an SRB algorithm intercomparison program based on scientific recommendations from Suttles and Ohring². Both the FIRE and SRB experiments require use of TIROS Operational Vertical Sounder (TOVS) data products. It is the purpose of this document to present those data in a concise form such that investigators from both programs may quickly evaluate the usefulness of this satellite product to their own particular investigation.

DATA DESCRIPTION

Standard TOVS vertical sounding parameters are given at the longitude and latitude of the data centroid of the box or area from which the soundings are obtained. Depending on the viewing zenith angle, the size of the box from which the soundings are averaged may range from 250 x 293 km to 518 x 293 km. The larger box corresponds to an area approximately the same size as the State of Wisconsin. In the event of dense cloud cover over much of the box, the data centroid may actually be near the edge of a box rather than near the center. Thus, it is generally not precisely known how far the centroids lie from the center of the

**PRC Kentron, Hampton, Virginia 23666

large-box areas represented on the standard-product tape. In general, it is reasonable to assume that the data represent conditions close to the centroid location and will become less representative as distance increases.

Figures 1 through 24 are maps showing the centroid locations of the standard-resolution TOVS data actually obtained for the FIRE/SRB experiment. The surface stations are those locations within a 125- x 125-km array where longwave Eppley PIR instrument measurements were made on a continuing basis. Locations of these individual stations near airports were as follows:

<u>Station</u>	<u>Latitude</u>	<u>Longitude</u>	<u>Elevation</u>
1. Madison (Truax)	43.1300°	89.3217°	263.7 m
2. Ft. McCoy	43.9583°	90.7550°	259.1 m
3. Stevens Point	44.5483°	89.5317°	339.6 m
4. Baraboo	43.5217°	89.7717°	301.5 m
5. Adams Co.	43.9667°	89.8000°	299.4 m
6. Wautoma	44.0417°	89.3050°	264.6 m
7. Oshkosh	43.9933°	88.5583°	245.7 m
8. Wausau	44.9250°	89.6200°	366.5 m

The numbers beside the TOVS centroid symbols in the figures are the GMT hour of the satellite overpass. (Zero hour GMT for October 10 is actually 6 p.m. c.s.t. on October 9 at the surface stations.) Local sunrise was at approximately 12:30 GMT and sunset was near 23:00 GMT.

The region shown in the figures is approximately 725 x 950 km in size. Over the 25-day experiment, there should have been 253 NOAA-6 and 306 NOAA-9 standard-resolution TOVS data sets in this region based on orbit and view-angle calculations. (NOAA-10 was operating but had not been declared operational. A standard product was not available from that system.) Instead, 242 NOAA-6 and 265 NOAA-9 data sets are available. Approximately 50 percent of the 507 NOAA-6 and NOAA-9 TOVS data sets were during daylight hours. During the experiment data period, only six standard-resolution TOVS centroids fell near the center of the FIRE/SRB surface-station array. One was during daylight hours. Forty-six centroids fell either within or near the edge of the surface-station array, however, with 29 during daylight. Examination of FIRE aircraft flight lines over the whole region between Michigan and mid-Minnesota indicates that only 11 standard-resolution TOVS centroids fell in the area of and near the time of aircraft data. It is clear that both FIRE and SRB activities would benefit from a re-reduction of the TOVS satellite measurements if a product

with larger numbers of small boxes could be obtained. Inclusion of data from NOAA-10 would also increase the soundings available to scientific investigators.

Table 1 gives detailed locations and times for the TOVS centroids which may be used to more closely coordinate the satellite data with experimental measurements. Also included are the theoretical box sizes associated with each centroid if all soundings were available. Size values are included here such that the user may assess how far the satellite view angle was off nadir. All boxes have a width of 293 km (in the direction of the satellite track). Boxes with a length of 250 km have viewing zenith angles $< 16.4^\circ$. Lengths of 309 km mean that the viewing zenith angle is between 16.4° and 33.3° . Boxes with length = 518 km are taken from soundings with viewing angles between 33.3° and 51.7° . A large box whose centroid falls in central Wisconsin was taken from a satellite which was probably passing over either the Toronto to Pennsylvania region or the North Dakota to Nebraska area.

Most vertical sounding parameters from the NOAA tapes are included in the table for each centroid location. Rows or columns with ***** symbols denote either missing or undefined data. Analysis methods and data limitations for the NOAA sounding parameters are given in Kidwell³. Values for blackbody temperature are incorrect for Band 20 of the High Resolution Vertical Sounder (HIRS/2). The value shown for Band 20, hereafter referred to as HIRS 20, may be converted to blackbody temperature, TBB, by the following equation:

$$TBB = \frac{3.487 \times 10^7}{e^{(20933.97/HIRS\ 20)}} \quad (1)$$

Values shown for RELATIVE REFLECTANCE in Table 1 were calculated from the cosine of SOLAR ZENITH, $COS(SZ)$, and equation (1) as follows:

$$RELATIVE\ REFLECTANCE = \frac{1 \times 10^7}{COS(SZ) \times e^{(20933.97/TBB)}} \quad (2)$$

The RELATIVE REFLECTANCE number is interpreted as a shortwave value relative to a Lambertian surface without directional effects being fully considered. Both equations (1) and (2) are based on unpublished empirical studies at the NASA Langley Research Center which took into account solar zenith angle, but not viewing zenith or azimuth angles. The resulting value has to be viewed with some caution because of this history.

CONCLUDING REMARKS

The region examined in this study was approximately 725 x 950 km in size. Over the 25-day period of the investigation, 91 percent of the theoretically possible NOAA-6 and NOAA-9 standard-resolution TOVS data were obtained. Seasonal timing of the

FIRE/SRB Wisconsin experiment made it such that 50 percent of the TOVS overpasses each day were in periods of daylight. Only 253 standard-resolution data sets were obtained in daylight for the entire region. Of these, 11 had centroids in locations where FIRE aircraft were taking data near the overpass time. Only 29 of the daylight centroids were near FIRE/SRB surface stations. An additional 17 sets are near ground stations in periods of darkness, however. A total of six standard-resolution TOVS centroids are near the center of the 125- x 125-km surface-station array. (Only one set is in daylight over the entire 25-day period.)

Much additional data would be available to complement ground station and aircraft investigations if the TOVS satellite measurements were re-reduced to produce a vertical sounding product with larger numbers of small boxes. Inclusion of NOAA-10 data would also improve the situation. Future field experiments should consider the problem of TOVS spatial resolution and historical data retrieval success rates.

- FIRE/SRB SURFACE STATIONS
- TOVS BOX CENTROID LOCATION
(NUMBERS = GMT HOUR)

Figure 4.-Location of TOVS Centroids for Oct. 12.

-
- The map displays the Great Lakes region with sampling locations marked by squares containing numbers and solid black dots. The numbers represent different sampling sites or depths. The locations are distributed across the lakes and surrounding areas. A scale bar at the bottom indicates 100 KM.

111

- FIRE/SRB SURFACE STATIONS
- TOVS BOX CENTROID LOCATION
- (NUMBERS = GMT HOUR)

Figure 6.-Location of TOVS Centroids for Oct. 15.

-
- The map shows the Great Lakes region of North America. Sampling locations are marked with squares containing numbers (9, 13, 19, 22) and solid black dots. The locations are distributed across the lakes and surrounding land areas. A scale bar indicates 100 KM.

113

- FIRE/SRB SURFACE STATIONS
- TOVS BOX CENTROID LOCATION
(NUMBERS = GMT HOUR)

Figure 8.-Location of TOVS Centroids for Oct. 17.

-
- The map displays the Great Lakes region with sampling locations for *Simulium vittatum*. Sampling sites are indicated by squares with numbers (0, 9, 12, 13, 19, 21, 23) and solid black dots. The locations are distributed across the lakes and surrounding land areas. A scale bar at the bottom indicates 100 KM.

115

-
- A map of the Great Lakes region of North America, showing the five Great Lakes (Superior, Michigan, Huron, Erie, and Ontario) and the surrounding land areas. The map is used to indicate sampling locations for the black fly *Simulium vittatum*. Sampling locations are marked with squares containing numbers (9, 13, 19, 20, 23) and dots. A scale bar at the bottom indicates 100 KM.
- The map shows the following sampling locations:
- Squares with numbers:**
 - 20: Superior Lake (top left), Lake Michigan (top right), Lake Huron (top center), Lake Erie (center left), Lake Ontario (center right), Lake Michigan (bottom left), Lake Huron (bottom center), Lake Erie (bottom right), Lake Ontario (bottom left), Lake Michigan (bottom center), Lake Huron (bottom right), Lake Erie (bottom left), Lake Ontario (bottom center), Lake Michigan (bottom right), Lake Huron (bottom left), Lake Erie (bottom center), Lake Ontario (bottom right).
 - 13: Superior Lake (center left), Lake Michigan (center center), Lake Huron (center right), Lake Erie (center left), Lake Ontario (center right), Lake Michigan (bottom center), Lake Huron (bottom left), Lake Erie (bottom right), Lake Ontario (bottom center), Lake Michigan (bottom left), Lake Huron (bottom right), Lake Erie (bottom center), Lake Ontario (bottom left), Lake Michigan (bottom right), Lake Huron (bottom center), Lake Erie (bottom left), Lake Ontario (bottom right).
 - 19: Superior Lake (bottom right), Lake Michigan (bottom right), Lake Huron (bottom right), Lake Erie (bottom right), Lake Ontario (bottom right).

- FIRE/SRB SURFACE STATIONS
- TOVS BOX CENTROID LOCATION
(NUMBERS = GMT HOUR)

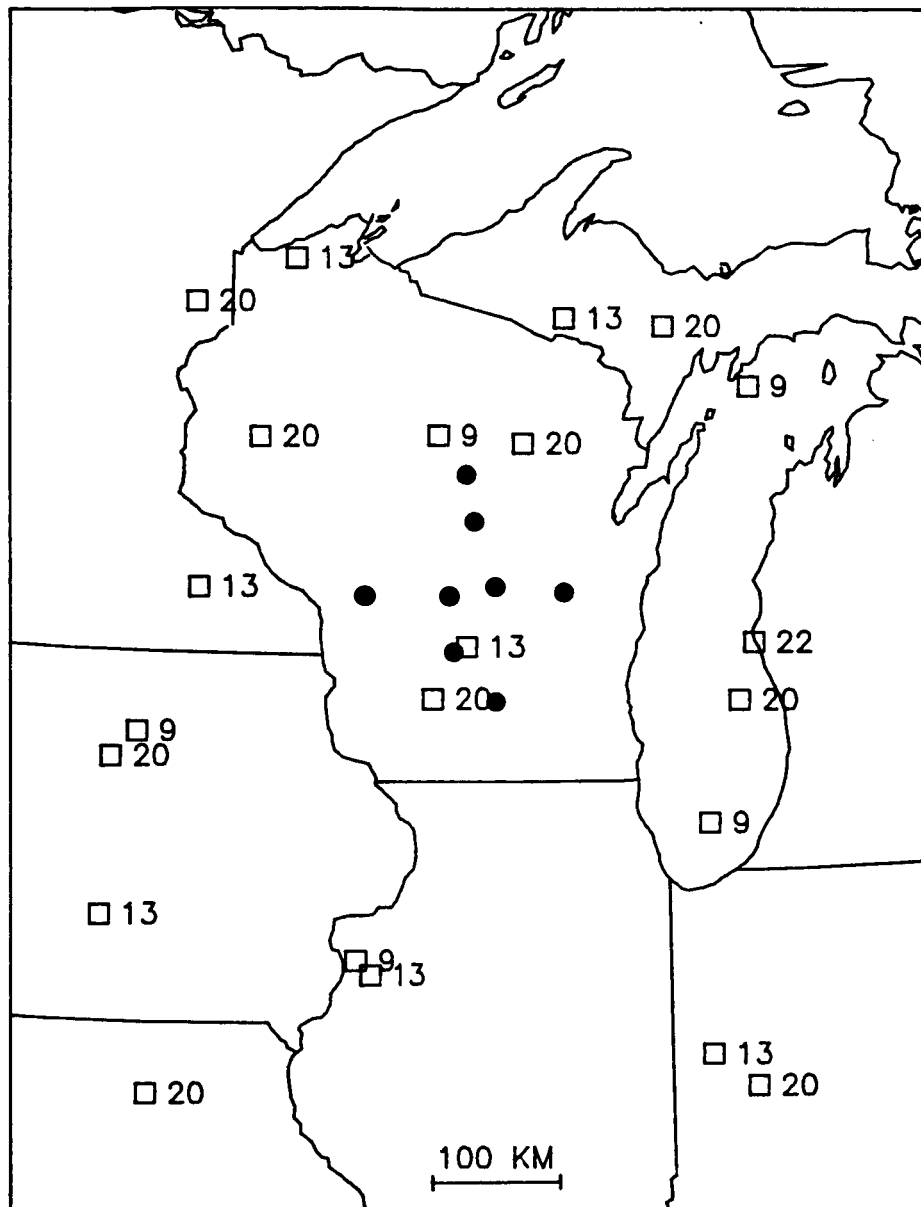

Figure 11.-Location of TOVS Centroids for Oct. 20.

-
- A map of the Great Lakes region showing sampling locations for the 1992-1993 season. The map includes the five Great Lakes and surrounding land areas. Sampling locations are marked with squares containing numbers (9, 12, 20) and solid black dots. A scale bar at the bottom indicates 100 KM.

-
- A map of the North Atlantic region showing the study area. The map includes the coastlines of North America, Europe, and Africa. Sampling stations are marked with squares containing numbers: 0, 9, 12, and 19. A central cluster of dots represents a specific area of interest. A scale bar at the bottom indicates 100 KM.

123

-
- A map of Africa showing the distribution of the three species of the genus *Pteropus*. The map includes the outlines of the African continent and major islands. Symbols used are squares for *P. n. n.* (9 or 23), circles for *P. n. m.* (9 or 23), and triangles for *P. n. a.* (9 or 23). The numbers 9 and 23 indicate the number of specimens collected. A scale bar at the bottom indicates 100 KM.

124

-
- The map displays the Great Lakes region, including Lake Superior, Lake Michigan, Lake Huron, Lake Erie, and Lake Ontario. Sampling locations for *Simulium vittatum* are indicated by squares with numbers and solid black dots. The numbers represent different sampling sites or groups. A scale bar at the bottom indicates 100 KM.

125

- FIRE/SRB SURFACE STATIONS
- TOVS BOX CENTROID LOCATION
(NUMBERS = GMT HOUR)

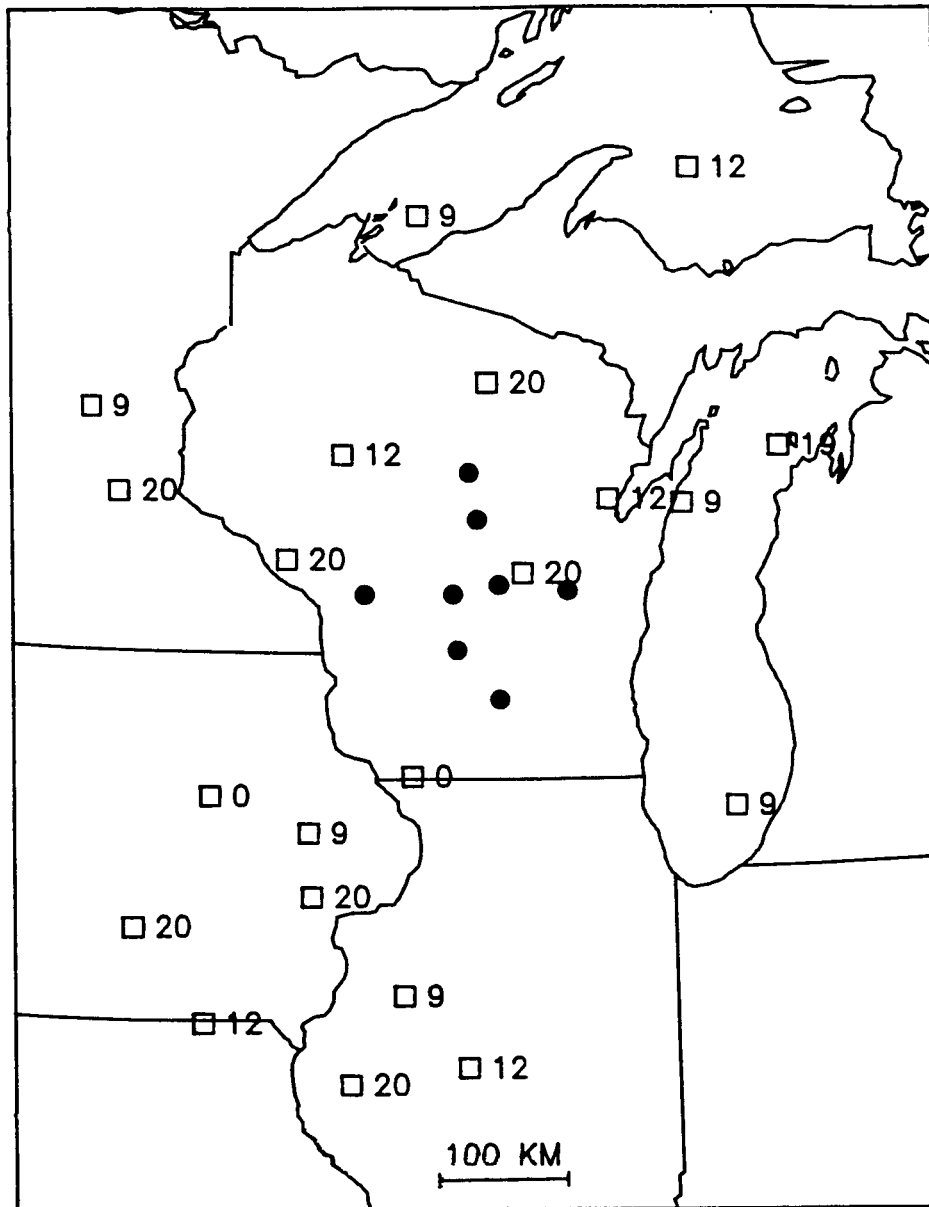

Figure 20.-Location of TOVS Centroids for Oct. 29.

-
- The map shows the Great Lakes region with sampling stations marked by squares and circles. The stations are numbered 0, 9, 12, 20, and 23. A scale bar indicates 100 KM.

127

-
- The map shows the Baltic Sea and surrounding landmasses. Sampling stations are marked with squares and numbers: 10, 20, 23, and 8. A cluster of seven black dots is located in the central Baltic Sea. A scale bar at the bottom indicates 100 KM.

128

- FIRE/SRB SURFACE STATIONS
- TOVS BOX CENTROID LOCATION
(NUMBERS = GMT HOUR)

Figure 23.-Location of TOVS Centroids for Nov. 1.

-
- The map displays the Great Lakes region with sampling stations marked by squares containing numbers (0, 8, 12, 20) and solid black dots. The stations are distributed across the lakes and surrounding waters. A scale bar at the bottom indicates 100 KM.

16. Abstract Maps and concise tables are presented which show TOVS box centroid locations, box size, and vertical sounding products from the NOAA-6 and -9 satellites for the FIRE/SRB Wisconsin experiment region during October 9 through November 2, 1986. In addition to the operational standard products, relative reflectance is calculated and presented based on values from HIRS/2 Band 20 measurements.
